

BI Database Consultant

1 The BI Consultant will be required to perform the following duties:

Elicit requirements from internal and external customers in relation to the Online Analytics Platform to be developed by the CLIENT as part of the RSI Project;

Design, build, and deliver business intelligence reporting and visualization required for the Online Analytics Platform application;

Design and document user experience requirements and perform user story elaboration;

Work closely with the CLIENT's BI Developers and BI Database Analysts to communicate data requirements and progressively elaborate user prototypes;

Assist with role-based access control and token-based authentication setup;

Conduct data validation and testing to ensure that the supporting databases and data sources meets specified requirements and quality standards;

Train and support CLIENT staff on the reporting and visualization capabilities of Microsoft Power BI;

Maintain documentation of all deliverables, including data sources and systems, business rationale, and stakeholders; and

Maintain BI toolset (Microsoft Power BI) documentation for support and maintenance purposes.

2 The BI Consultant must possess the following:

Minimum of five (5) years of demonstrated related experience as a business intelligence consultant or business intelligence analyst in a data-driven organization.

Working knowledge with Microsoft Power BI.

3 The BI Consultant should possess the following:

Extensive knowledge in data visualization and user experience;

Knowledge of Team Foundation Services (TFS) and agile software release practices; and

Ability to perform work according to CLIENT source code management, release management and incident management.

4 The following attributes held by the BI Consultant may be considered an asset:

Knowledge of role-based access control and token-based authentication in a Microsoft environment;

Knowledge and experience of the CLIENT's processes or insurance models;

Knowledge of actuarial practices and principles; and

Understanding of the CLIENT's business and/or testing processes.
